

Types of Constellations

Big Dipper

Six of the stars that form the asterism.

Orion/ Hunter

Join the three bright stars that form the straight line of the hunter's belt.

Gemini/ The twins

The twins can be found above and to the side of the hunter's upraised arm.

Taurus/ The Bull

Find the large red star, Aldebaran, which is near the fork of the bull's horns.

Aquarius

The protruding line to the right is Aquarius's right arm, with the large downward shape being a combination of the water flowing down out of the vase and his right leg.

Cassiopeia

Find "W" shape formed by five bright stars

Leo

A distinctive backwards question mark forms the head and chest, then moves to the left to form a triangle and the lion's rear end.

Pisces

It forms a large "V" with the right fish forming a small "O" on the end, and the left fish forming a small triangle on the end.

Scorpius

Locate the brightest star in the neck of scorpio. To the right of the heart are 3-5 stars that form the head. To the left are a long line of stars that curve into a sideways or upside-down question mark.
